### Notes:

- 1 Product can be configured alternately with form B or C auxiliary switches if required. This changes the product part number, depending on specific auxiliary configuration. Consult Tyco Electronics for availability and part number
- <sup>2</sup> Ambient conditions and conductor design affect rating. Terminal temperature rise should be 75°C max above ambient. Keep relay terminals below 150°C max continuous, 175°C max for two hours, and 200°C for 1 minute.
- <sup>3</sup> Stabilized reading. Contact resistance may exceed spec in the first 10 minutes of current carry.
- 4 Units are polarity sensitive. Approximately 50% de-rating for reverse polarity switching. Consult factory for review of specific requirements.
- Over temperature range unless noted. Suggested coil pulse = 50-100 ms.
- <sup>6</sup> 24V and 48V coils available on request consult factory.
- 7 Intermittent Duty Coil. Coil overheating can occur if duty cycle is exceeded. Limit average coil power to 10W maximum.
